

LAT-Opac™ Software Platform

In addition to providing an effectively a “zero-footprint” OPAC capability, the key part of the LAT-Opac™ system is the software platform that has been developed. We treat the LAT-Opac™ as a platform with the OPAC capability of being just one of many potential uses.

With that in mind, we can now, via LAT-QuickKeys™ offer access to virtually any resource you have in the library. For example, in addition to offering access to the OPAC, you can now allow the patrons to access:

- Web,
- Calendar,
- PC reservation system,
- Any application software loaded on the computer (Word, Excel ...etc.,)
- Any existing on-line or common database, such as Bowker, Hoovers ...etc.,
- L-Guide™ wayfinding platform (optional)
- More...

LAT-Opac™ maximizes the use of a traditional OPAC station to be a much more universal device.
